

Fujifilm Sericol India introduces Seritrans Ta006 inks

Pune, 17 March, 2016: Fujifilm Sericol India announced the addition of new water based ink called Seritrans TA 006 to its range of premium textile screen printing inks, which is designed for litho backup transfer printing.

Developed to offer a complete solution to garment printers, TA-006 inks are the latest innovation in water based solutions that perform to the most rigorous testing and aesthetic requirements in the market.

Speaking about the launch, Mr. Ganesh Krishnan, Executive Director, Marketing said “This product is an improved version of already popular Seritrans TA 003, which offers more flexibility and has a softer feel. The ink provides good screen stability and has very good resistance against dry and wet friction.”

He further added “Seritrans TA 006 has been formulated without PVC and Phthalate and complies with restricted substance list of major brands. Fujifilm Sericol India today provides the most extensive portfolio to meet market demands. Our ability to provide innovative printing solutions, uniquely positions us to offer the total solution that creates a difference for our customers.”

About Fujifilm Sericol India Pvt. Ltd. : Among the top ten printing ink suppliers globally, Fujifilm Sericol is widely recognized for its strong service ethics, innovation and product quality. With manufacturing facilities in three continents, distribution network in 80 countries and marketing units at all major global locations, Fujifilm Sericol has established itself as a major provider of robust ink solutions to the Screen, Digital and Narrow Web industries.
